

Tech Tip

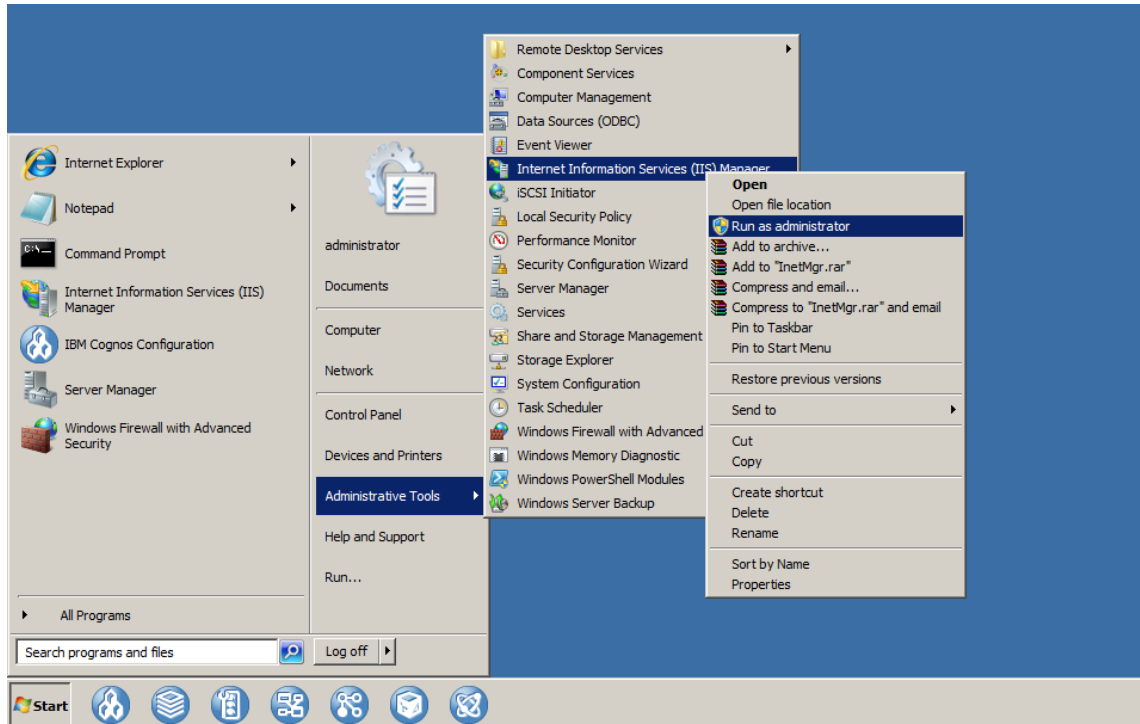

Open Dynamic Query Analyzer (DQA) Logs via a URL

Products: Cognos 10.2.1

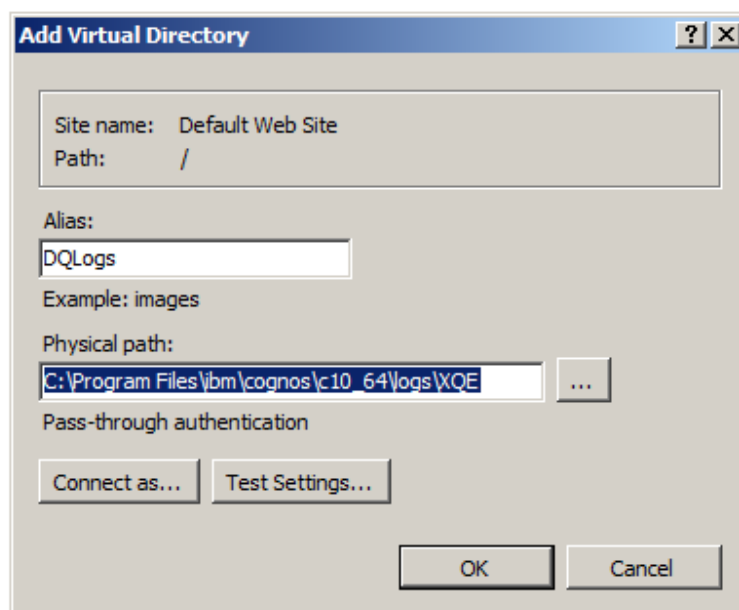

Document Number: TRI-COG-DQA-001

This document describes how to set up the Virtual directory that allows users to browse Dynamic Query Analyzer logs via a URL.

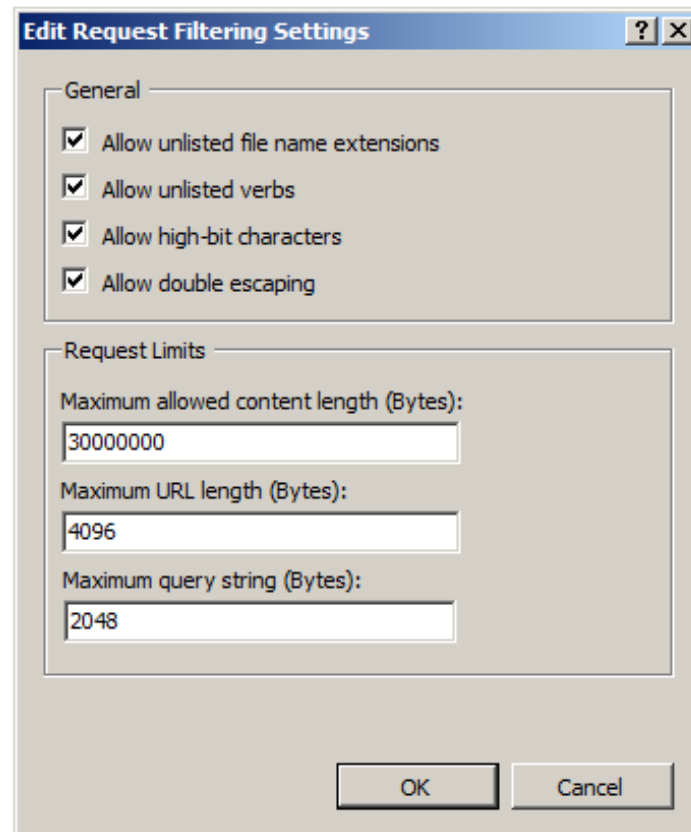

1. Navigate to Administrative Tools and Right Click on Internet Information Services (IIS) Manager. Select Run as administrator

2. Expand the ISS Server and Sites. Right Click on Default Web Site and select Add Virtual Directory.
3. In the Alias box type DQLogs.
4. In the Physical path point it to the Logs/XQE within the Cognos installation directory. Typically: C:\Program Files\ibm\cognos\c10_64\logs\XQE

5. Click Ok
6. Click on the DQLogs Virtual Directory
7. Select Director Browsing. Under Actions click Enable.
8. If not already selected click DQLogs. Select Request Filtering.
9. Under Actions Select Edit Feature Settings and check Allow double escaping.

10. Click Ok
11. Restart the IIS Server.
12. Launch Dynamic Query Analyzer. Select Open and check From URL: If a log exists within the XQE folder it should be displayed in the open log window:
