STEP-BY-STEP GUIDE

# HOW TO OVERCOME THE DPR-ERR-2079 ERROR MESSAGE STEP-BY-STEP GUIDE

Transformer error appears when report is selected as a data source.

“DPR-ERR-2079 Firewall Security Rejection. Your request was rejected by the security firewall.”

The above error is displayed with Cognos Analytics V11 Transformer client when selecting the report as a data source.

This is only visible when selecting a report as a data source. When selecting a package, it will work as expected.

This is due to the dispatcher external URL still not being updated in the new Cognos Analytics V11 release.

To overcome the issue, change the URL to the old one <http://servername:9300/p2pd/servlet/dispatch> instead of <http://servername:9300/bi/v1/disp> that pertains to the new URL.
